# Introduction

## INTRODUCTION

This manual is designed to assist you with the maintenance of the Model SM204 Stretcher. Read it thoroughly before using the equipment or beginning any maintenance on it.

## SPECIFICATIONS

Maximum Weight Capacity	700 pounds 
Overall Stretcher Length	84" (± .5")
Overall Stretcher Width (Siderails Up)	33.5" & 37" (± .5")
Overall Stretcher Width (Siderails Down)	30.25" & 30.75" (± .5")
Minimum / Maximum Bed Height	20.75" / 34" (± .5")
Fowler Angle	0 to 90 ° (± 3°)
Knee Gatch Angle	0 to 40 ° (± 1°)
Trendelenburg / Reverse Trendelenburg	+16 / -16 ° (± 1°)
Optional Scale System Weight Operating Range	0 lbs. to maximum capacity of the stretcher
Optional Scale System Accuracy	Between 10° Trend & 10° reverse Trend* ± 2 lbs. of weights below 100 lbs. ± 2% of weights above 100 lbs.
Optional Scale System Environmental Requirements for Operation	60° F – 80° F 0% – 90% Relative Humidity

\* Scale does not meet accuracy claims at Trend angles outside the specified range.

Stryker reserves the right to change specifications without notice.

## WARNING / CAUTION / NOTE DEFINITION

The words WARNING, CAUTION and NOTE carry special meanings and should be carefully reviewed.

### WARNING

Alerts the reader about a situation, which if not avoided, could result in death or serious injury. It may also describe potential serious adverse reactions and safety hazards.

### CAUTION

Alerts the reader of a potentially hazardous situation, which if not avoided, may result in minor or moderate injury to the user or patient or damage to the equipment or other property. This includes special care necessary for the safe and effective use of the device and the care necessary to avoid damage to a device that may occur as a result of use or misuse.

### NOTE

This provides special information to make maintenance easier or important instructions clearer.

Safe Working Load

# Preventative Maintenance

---

## CHECKLIST

- \_\_\_\_\_ All fasteners secure
- \_\_\_\_\_ Siderails move and latch properly
- \_\_\_\_\_ Engage brake pedal and push on the stretcher to ensure all casters lock securely
- \_\_\_\_\_ All casters secure and swivel properly
- \_\_\_\_\_ Body restraints working properly
- \_\_\_\_\_ IV pole intact and operating properly
- \_\_\_\_\_ Oxygen bottle holder intact and operating properly
- \_\_\_\_\_ Fowler operating and latching properly
- \_\_\_\_\_ Knee Gatch operating properly
- \_\_\_\_\_ Trendelenburg/Reverse Trendelenburg operating properly
- \_\_\_\_\_ No rips or cracks in mattress cover
- \_\_\_\_\_ Ground chain intact
- \_\_\_\_\_ No leaks at hydraulic connections
- \_\_\_\_\_ Hydraulic jacks holding properly
- \_\_\_\_\_ Hydraulic drop rate set properly
- \_\_\_\_\_ Hydraulic oil level sufficient
- \_\_\_\_\_ Lubricate where required
- \_\_\_\_\_ Accessories and mounting hardware in good condition and working properly
- \_\_\_\_\_ No cables worn or pinched (optional scale system)
- \_\_\_\_\_ All electrical connections tight (optional scale system)
- \_\_\_\_\_ All grounds secure to the frame (optional scale system)
- \_\_\_\_\_ Batteries sufficiently charged (optional scale system)
- \_\_\_\_\_ Display housing intact and not damaged (optional scale system)
- \_\_\_\_\_ Display label intact and not damaged (optional scale system)
- \_\_\_\_\_ Load cells intact and not damaged (optional scale system)
- \_\_\_\_\_ Scale calibrated properly. Recalibrate, if necessary (optional scale system)

Serial No. \_\_\_\_\_  
\_\_\_\_\_

Completed By: \_\_\_\_\_ Date: \_\_\_\_\_

## NOTE

Preventative maintenance should be performed at a minimum of annually. A preventative maintenance program should be established for all Stryker Medical equipment. Preventative maintenance may need to be performed more frequently based on the usage level of the product.

# Cleaning

---

## CLEANING

Model 1015 stretchers are designed to be power-washable. The unit may show some signs of oxidation or discoloration from continuous washing. However, no degradation of the stretcher's performance characteristics or functionality will occur due to power washing as long as the proper procedures are followed.

- Follow the cleaning solution manufacturer's dilution recommendations exactly.
- Remove the mattress prior to washing the unit; do not wash the mattress with the stretcher.
- Position the Fowler at 45°, place the unit in full reverse Trendelenburg (foot end down), raise the siderails, and place the I.V. poles and push handles in the up position.
- Stryker Medical recommends the standard hospital surgical cart washer for power washing Model 1015 stretchers.
- Do not replace the mattress on the stretcher until the unit is completely dry.
- Before returning the unit to service, verify all labels are intact, verify the brake/steer pedal locks properly in both positions and check all components for proper lubrication.

DO NOT STEAM CLEAN THE UNIT. Use a maximum water temperature of 180°F/82°C. Maximum air dry temperature (cart washers) is 240°F/115°C. Water pressure – 1500 psi/103.5 bar. If a hand held wand is being used to wash the unit, the pressure nozzle must be kept a minimum of 24 inches/.61m from the unit.

Stretchers must have maintenance performed after a minimum of every fifth washing. Refer to the maintenance manual for specific lubrication instructions.

Failure to comply with these instructions may invalidate any/all warranties.

Do not use abrasive cleaners to clean the display enclosure for the optional scale system. Do not allow cleaning solutions or other fluids to pool on the display unit. Wipe dry all surfaces after spills or cleaning.

# Cleaning

## CLEANING (CONTINUED)

In general, when used in those concentrations recommended by the manufacturer, either phenolic type or quaternary type disinfectants can be used. Iodophor type disinfectants are not recommended for use because staining may result. The following products have been tested and have been found not to have a harmful effect WHEN USED IN ACCORDANCE WITH MANUFACTURERS RECOMMENDED DILUTION.\*

TRADE NAME	DISINFECTANT TYPE	MANUFACTURER	*MANUFACTURER'S RECOMMENDED DILUTION
A33	Quaternary	Airwick (Professional Products Division)	2 ounces/gallon
A33 (dry)	Quaternary	Airwick (Professional Products Division)	1/2 ounce/gallon
Beaucoup	Phenolic	Huntington Laboratories	1 ounce/gallon
Blue Chip	Quaternary	S.C. Johnson	2 ounces/gallon
Elimstaph	Quaternary	Walter G. Legge	1 ounce/gallon
Franklin Phenomysan F2500	Phenolic	Purex Corporation	1 1/4 ounce/gallon
Franklin Sentinel	Quaternary	Purex Corporation	2 ounces/gallon
Galahad	Phenolic	Puritan Churchill Chemical Company	1 ounce/gallon
Hi-Tor	Quaternary	Huntington Laboratories	1/2 ounce/gallon
LPH	Phenolic	Vestal Laboratories	1/2 ounce/gallon
Matar	Phenolic	Huntington Laboratories	1/2 ounce/gallon
Omega	Quaternary	Airwick (Professional Products Division)	1/2 ounce/gallon
Quanto	Quaternary	Huntington Laboratories	1 ounce/gallon
Sanikleen	Quaternary	West Chemical Products	2 ounces/ gallon
Sanimaster II	Quaternary	Service Master	1 ounce/gallon
Vesphene	Phenolic	Vestal Laboratories	1 1/4 ounce/ gallon

Quaternary Germicidal Disinfectants, used as directed, and/or Chlorine Bleach products, typically 5.25% Sodium Hypochlorite in **dilutions ranging between 1 part bleach to 100 parts water, and 2 parts bleach to 100 parts water are not considered mild detergents. These products are corrosive in nature and may cause damage to your stretcher if used improperly.** If these types of products are used to clean Stryker patient handling equipment, measures must be taken to insure the stretchers are rinsed with clean water and thoroughly dried following cleaning. Failure to properly rinse and dry the stretchers will leave a corrosive residue on the surface of the stretcher, possibly causing premature corrosion of critical components.

### NOTE

Failure to follow the above directions when using these types of cleaners may void this product's warranty.

## REMOVAL OF IODINE COMPOUNDS

This solution may be used to remove iodine stains from mattress cover and foam footrest pad surfaces.

1. Use a solution of 1–2 tablespoons Sodium Thiosulfate in a pint of warm water to clean the stained area. Clean as soon as possible after staining occurs. If stains are not immediately removed, allow solution to soak or stand on the surface.
2. Rinse surfaces which have been exposed to the solution in clear water before returning bed to service.

# Service Information

## CASTER COVER INSTALLATION AND REMOVAL

Looking through the larger of the two side cut-outs, align the cover with the axle nut or bolt head, as shown. Push down on the opposite side of the cover until the single prong engages the caster horn.

Push on the cover with your palm until the double prongs engage.

To remove the wheel cover, insert a large screwdriver into the cut-out in the side of the wheel cover and into the space between the double prongs. Pry up the cover to disengage the double prongs and push sharply upward to disengage the single prong.

## CASTER REMOVAL

### Required Tools:

9/16" Open End Wrench

1. Remove the caster cover.
2. While keeping pressure on the caster bolt with your index finger, use a 9/16" open end wrench to remove the nylock hex nut on top of the caster assembly.
3. Using the brake ring, lift up on the base assembly and pull the caster assembly down to remove it.
4. Reverse steps 1–3 to install the new caster.

# Service Information

---

## BRAKE ROD REMOVAL

### Required Tools:

Hammer

7/32" Punch

String or Bungee Cords

1. Pump the litter up to full height.
2. Lift the base hood and support it from the litter using string or bungee cords.
3. With the brake/steer pedal in the steer position, remove the clevis pin and rue ring cotter connecting the brake rod to the brake rod drive link at each end of the stretcher.
4. Remove the two clevis pins and rue ring cotters connecting the brake rods to the drive arm at the center of the base near the cam bracket assembly.
5. Pull on the butterfly "V" pedals to remove the brake rods from the base.
6. Reverse steps 1–5 to reinstall the brake rod.

---

### CAUTION

When reattaching the brake rod assembly to the base frame, set the torque specs **no higher** than 15 ft.-lbs. or damage could occur to the bolts.

## SIDE CONTROL BRAKE ROD REMOVAL

### Required Tools:

Hammer

7/32" Punch

Needle Nose Pliers

String or Bungee Cords

1. Pump the litter up to full height.
2. Lift the base hood and support it from the litter using string or bungee cords.
3. Using a hammer and 7/32" punch, drive the groove pin out of the butterfly "V" pedal on the patient's left side and remove the pedal.
4. Using a hammer and 7/32" punch, drive out the groove pin connecting the side control link to the side control brake rod.
5. Pull on the butterfly "V" pedal on the patient's right side to remove the side control brake rod from the base.
6. Reverse steps 1–5 to reinstall the brake rod.

---

### CAUTION

When reattaching the brake rod assembly to the base frame, set the torque specs **no higher** than 15 ft.-lbs. or damage could occur to the bolts.

# Service Information

---

## RELEASE PEDAL ADJUSTMENT

1. Manually disengage the release pedal swivel (item G on [page 38](#)) from the release pedal assembly.
2. To increase the release rod engagement with the release valve, turn the release pedal swivel clockwise on the threaded release rod.
3. To decrease the release rod engagement with the release valve, turn the release pedal swivel counter-clockwise on the threaded release rod.

### NOTE

If the pedal swivel assembly is threaded too far onto the release rod, the release valve will be partially activated and the jack will drift.

## FOOT END RELEASE PEDAL REPLACEMENT

**Required Tools:** Needle Nose Pliers

1. Apply the stretcher brakes.
2. Disconnect the release pedal return springs from the foot end release pedals.
3. Remove the rue ring cotters and the clevis pins connecting the foot end release pedals to the mounting bracket.
4. Rotate the pedals upward.
5. Remove the rue ring cotters connecting the head end and foot end release rods to the foot end release pedals and remove the pedals.
6. Reverse steps 2–5 to install the new pedals.

## FOOT END RELEASE PEDAL ROD REMOVAL

**Required Tools:** Needle Nose Pliers

1. Remove the foot end release pedal (see procedure above).
2. Remove the snap in nyliners holding the foot end pedal release rods in the pedal mounting bracket.
3. Unsnap the foot end pedal release rods from the white plastic release rod brackets.
4. Dislodge the side control release pedal swivels from the studs on the side control release pedal weldments.
5. Remove the foot end pedal release rods.
6. Reverse steps 1–5 to reinstall the pedal rods.

# Service Information

---

## BRAKE RING REMOVAL

### Required Tools:

9/16" Socket w/Extension    3/8" Drive Ratchet    Needle–Nose Pliers    String or Bungee Cord

1. Pump the litter up to full height.
2. Lift the base hood and support it from the litter using string or bungee cords.
3. Using needle–nose pliers, unhook the extension springs from the top of the base caster tubes.
4. Remove the plastic caster covers.
5. While putting pressure on the caster carriage bolt, use a 9/16" socket and a 3/8" drive ratchet to remove the caster nut on both sides of the stretcher.
6. Remove the casters.
7. Remove the brake rod (see procedure [page 9](#)).
8. Remove the cotter pin from the clevis pin in the center of the brake ring weldment.
9. Remove the cotter pin from the bearing pivot support.
10. Remove the 3/4" nylock hex nut from the bearing pivot support.
11. Remove the drive link assembly.
12. Pull the brake ring down and out away from the stretcher base frame.
13. Reverse steps 1–12 to reinstall the brake ring.

## BIG WHEEL REMOVAL

### Required Tools:

Large Standard Screwdriver    Small Standard Screwdriver    String or Bungee Cords

1. Lift the base hood and separate the Velcro holding it to the base frame. Support the hood from the litter using bungee cords so it is out of the way.
2. Using a large, standard screwdriver, pop off the hub cap in the center of the wheel.
3. Using a small, standard screwdriver, remove the spiral retaining ring from the groove on the wheel axle.
4. Remove the Big Wheel.
5. Reverse steps 1–4 to reinstall the Big Wheel.

# Service Information

---

## BIG WHEEL CARRIAGE ASSEMBLY REMOVAL

### Required Tools:

1/2" Socket

3/8" Drive Ratchet

Needle–Nose Pliers

1. Remove the litter top from the stretcher (see [page 14](#)).
2. Lift the base hood off the base frame.
3. With the brake/steer pedal in the steer position, remove the clevis pin and rue ring cotter connecting the brake rod to the brake rod drive link at each end of the stretcher.
4. Remove the two clevis pins and rue ring cotters connecting the brake rods to the drive arm at the center of the base near the cam bracket assembly.
5. Pull the brake shafts straight out away from the base.
6. Remove the four hex washer head screws holding the cam bracket assembly to the base frame and remove the cam bracket assembly.

### NOTE

On a base with 4–sided brakes, remove the rue ring cotter and clevis pin connecting the side control big wheel linkage assembly to the yoke weldment on the end control brake pad at the foot end of the stretcher.

7. Remove the two hex washer head screws holding the carriage weldment to the base frame and remove the carriage assembly.
8. Reverse steps 1–7 to reinstall the carriage assembly.

## SIDE CONTROL BIG WHEEL LINKAGE ASSEMBLY REMOVAL

### Required Tools:

1/4" Punch

Hammer

Needle–Nose Pliers

String or Bungee Cords

1. Pump the litter up to full height.
2. Lift the base hood and support it from the litter using string or bungee cords.
3. Using a hammer and 1/4" punch, drive out the slotted spring pin connecting the butterfly "V" pedal on the patient's right side to the side control wheel axle.
4. Remove the butterfly "V" pedal and set it aside.
5. Using the hammer and 1/4" punch, drive out the slotted spring pin holding the side control Big Wheel linkage yoke weldment to the side control wheel axle.
6. Pull straight out on the patient's left side butterfly "V" pedal and remove the side control wheel axle.
7. Using needle–nose pliers, remove the hair pin cotter and washer holding the toggle pivot plate to the side control Big Wheel carriage assembly.
8. Remove the rue ring cotter and clevis pin connecting the side control Big Wheel linkage rod end link to the end control brake rod.
9. Remove the side control Big Wheel linkage assembly and set it aside.
10. Reverse steps 1–9 to reinstall the linkage assembly.

# Service Information

---

## BIG WHEEL CAM GAS SPRING DAMPENER REMOVAL

### Required Tools:

1/2" Socket

3/8" Drive Ratchet

Needle–Nose Pliers

1. Remove the litter top from the stretcher (see [page 14](#)).
2. Lift the base hood off the base frame.
3. Remove the two clevis pins and rue ring cotters connecting the brake rods to the drive arm at the center of the base near the cam bracket assembly.
4. Pull the brake shafts straight out away from the base.
5. Remove the four hex washer head screws holding the cam bracket assembly to the base frame and remove the cam bracket assembly.
6. Remove the rue ring cotter from the dampener mounting pin and remove the pin.
7. Lift up on the (patient) left side of the cam bracket and remove the rue ring cotter holding the dampener to the dampener arm and remove the dampener.
8. Reverse steps 1–7 to install the new dampener.

# Service Information

---

## LITTER TOP REMOVAL

**Required Tools:**      1/2" Socket w/Extension      3/8" Drive Ratchet      Standard Screwdriver

1. Using the foot pedal, pump up the litter top to full height.
2. Remove the stretcher mattress
3. Using a 1/2" socket, and a 3/8" drive ratchet, remove the truss head screws holding the jack support tubes to the jack shafts.
4. Thread a 7/16–20 fine thread bolt far enough into the top of the jack supports to separate the litter top from the jack shaft.
5. With the assistance of another person, lift the litter straight up to remove it from the jack shafts and set it aside.

## JACK DESCENT RATE ADJUSTMENT

**Required Tools:**

Screwdriver      Bungee Cords (or equivalent)

**Adjustment Procedure:**

1. Pump the litter up to full height.
2. Lift the base hood, separating the hood from the base frame. Support the hood from the litter using bungee cords so it is out of the way.
3. The descent rate needle valve is located on the base of the jack. Turning the needle valve clockwise, with a screwdriver, will decrease the rate of descent. Turning it counterclockwise will increase the rate of descent.

**NOTE**

The larger percentage of a patient's weight is located in the torso area. Adjust descent rate accordingly.

4. Remove the bungee cords supporting the base hood and secure the hood to the base frame.

**NOTE**

The jack descent rate is preset at the factory and adjustment is not recommended.

## REMOVAL OF EXCESS AIR (VACUUM) FROM THE HYDRAULIC SYSTEM

1. Verify all hydraulic linkages are secure and operating properly.
2. Using the pump pedal, actuate the system several times to force the air through the system. The jack should now raise properly.

# Service Information

---

## HEAD END HYDRAULIC JACK REMOVAL

### Required Tools:

1/2" Socket w/Extension

3/8" Drive Ratchet

1. Remove the litter top from the stretcher (see [page 14](#)).
2. Using a 1/2" socket with extension and a 3/8" drive ratchet, remove the two hex head screws holding the jack base to the stretcher base frame.
3. Remove the two hex head screws holding the jack reservoir clamp to the base frame and remove the clamps.
4. Lift straight up on the pump connecting rod and disconnect the pump piston from the connecting rod.
5. Disconnect the pump pedal swivel from the release pedal mounting plate.
6. Remove the head end release rod from the release valve assembly.
7. Using a 1/2" socket with extension and a 3/8" drive ratchet, remove the two hex head screws holding the jack base to the stretcher base frame.
8. Lift out the jack assembly.
9. To reinstall the jack, install the bolts on the jack and reservoir clamp but do not tighten them fully.
10. Reinstall the pump connecting rod and release rod.
11. Depress the pump pedal fully (to the floor). This will properly locate the jack onto the base frame.
12. Tighten the bolts on the jack and reservoir clamp.
13. Pump up the litter and apply weight to verify the jacks hold and do not drift.

### NOTE

The jack descent rate is preset at the factory and adjustment is not recommended.

## FOOT END HYDRAULIC JACK REMOVAL (BASE WITH DUAL CONTROLS)

### Required Tools:

1/2" Socket

3/8" Drive Ratchet

Pliers

1. Remove the litter top from the stretcher (see [page 14](#)).
2. Lift the base hood off the base frame.
3. Remove the two hex washer head screws and washers connecting the pump pedal link to the foot end pump pedal assembly and pump connecting rod.
4. Remove the foot end release rod from the release valve on the jack assembly by dislodging the release pedal swivel from the pins on the release pedal weldment.
5. Dislodge the jack pump piston from the pump connecting rod.
6. Remove the two hex washer head screws holding the reservoir clamp.
7. Remove the jack assembly.
8. Reverse steps 1–7 to install the new jack.

### NOTE

The jack descent rate is preset at the factory and adjustment is not recommended.

# Service Information

---

## LITTER CORNER COVER REPLACEMENT

### Required Tools:

Drill w/ 1/4" Bit

T25 Torx

Utility Knife

1. Drill out the rivet holding the IV pole and/or push handle in the socket and remove the IV pole/handle from the socket.
2. Using a utility knife, pry off the three hole plugs in the top of the cover.
3. Using a T25 Torx, remove the 3 screws holding the top and bottom covers together and pull apart the cover.
4. Reverse to install the new cover.

## GATCH RELEASE HANDLE REPLACEMENT

### Required Tools:

Needle Nose Pliers

1. Twist off the Gatch release handle knob.
2. Using needle nose pliers, remove the cotter pin holding the Gatch release rod to the Gatch release link.
3. Pull out the handle release rod.
4. Reverse to install the new Gatch release handle assembly.

## GATCH VALVE BODY REPLACEMENT

### Required Tools:

1/2" Socket

3/8" Drive Ratchet

Needle Nose Pliers

1. Using needle nose pliers, remove the rue clip and clevis pin connecting the Gatch pump ram to the pump handle.
2. Using a 3/8" drive ratchet and a 1/2" socket, remove the three hex head bolts holding the Gatch valve body to the Gatch weldment and the lock nut holding the release link. Carefully lower the valve body out of the weldment.
3. Using needle nose pliers, remove the two rue clips and two clevis pins connecting the hydraulic cylinder to the seat section and the thigh section. Remove the valve body assembly.
4. Reverse to install the new Gatch valve body assembly.

# Service Information

---

## SIDERAIL ASSEMBLY REMOVAL AND REPLACEMENT

### Required Tools:

1/2" Socket                                      3/8" Drive Ratchet                                      Torque Wrench

1. Raise the Fowler. Remove the slider board from the storage tray.
2. Pull up on the monitor/utility tray to remove it from the litter frame.
3. If you're replacing the left siderail assembly, use a 1/2" socket and 3/8" drive ratchet, remove the four hex head cap screws holding the O2 holder bracket to the litter frame and remove the O2 holder.
4. Remove the four hex head cap screws holding the slider board tray to the litter frame.
5. Remove the rue ring cotter holding the Fowler pivot bolt and remove the pivot bolt.
6. Remove the two bolts holding the frame tie weldment.
7. Remove the pan head screws holding the plastic litter corner covers and remove the covers.
8. Remove the two bolts holding the Fowler drop seat bracket.
9. Remove the six bolts holding the siderail to the head end and foot end litter weldments.
10. Carefully remove the siderail assembly.
11. Slide the side of the stretcher with the remaining siderail next to a wall to brace it or support it with bungee cords before starting to install the new siderail.
12. Lift the new siderail into position.
13. Insert the foot end jack support into the hole in the support tube bracket on the siderail. Insert the head end jack support tube into the slot in the Trend slide block.
14. Install the three bolts at the foot end litter weldment. Tighten to 13 foot-pounds torque.
15. Install the two bolts at the frame tie weldment.
16. Install the three bolts at the head end litter weldment.
17. Install the two bolts at the Fowler drop seat bracket. Tighten to 13 foot-pounds torque.
18. Install the litter corner covers, the slider board tray, the O2 holder and the monitor tray.

# Service Information

---

## SIDERAIL LATCH REPLACEMENT

### Required Tools:

3/8" Drive Ratchet

T40 Torx Bit

1. Using the foot pedal, raise the litter to maximum height.
2. Remove the two bolts (A) holding the siderail latch (B) to the litter frame and discard the bolts and latch.
3. Using the new bolts provided in the kit, install the new siderail latch.
4. Verify proper latching and unlatching of the siderail before returning the stretcher to service.

# Service Information

---

## PNEUMATIC CYLINDER REPLACEMENT

### Required Tools:

3/8" Drive Ratchet

3/8" Socket

Needle Nose Pliers

1. Using a 3/8 drive ratchet and 3/8" socket, remove the bolt connecting the pneumatic cylinder to the Fowler weldment. Save the bushing and spacers to use with the new cylinder.
2. Turn the cylinder counterclockwise to thread it out of the gas spring trip on the litter frame tie weldment.
3. Pull the Fowler cable off the gas spring trip.
4. Using needle nose pliers, pull off the rue ring cotter and remove the clevis pin holding the gas spring trip to the litter frame tie weldment.
5. Depress the new cylinder fully.
6. Thread the cylinder into the gas spring trip until it stops.

---

### CAUTION

Do not use a wrench, pliers, etc. to grip the cylinder. Gripping the cylinder too tightly may mar the surface of the cylinder and cause damage.

### NOTE

When reinstalling the bolt and the clevis pin, use the holes in each bracket nearest the foot end of the stretcher for a drop seat Fowler and the holes in each bracket nearest the head end of the stretcher for a standard Fowler.

7. Replace the bolt, bushing and spacers holding the cylinder to the Fowler weldment. The bolt will only thread through the bracket from the patient right side.
8. Lift the Fowler slightly until the parts are aligned and replace the clevis pin and the rue ring cotter to connect the gas spring trip to the litter frame tie weldment.
9. Reconnect the Fowler cable.

## IV POLE REPLACEMENT

### Required Tools:

T25 Torx

Utility Knife

1/2" Socket

3/8" Drive Ratchet

1. Using a utility knife, pry off the three hole plugs in the top of the litter corner cover.
2. Using a T25 Torx, remove the 3 screws holding the top and bottom covers together and pull apart the cover.
3. Remove the bolt holding the IV pole socket to the litter frame and remove the IV pole.
4. Reverse to install the new IV pole and reinstall the litter corner cover.

# Service Information

---

## OXYGEN BOTTLE HOLDER REPLACEMENT

### Required Tools:

3/8" Drive Ratchet

1/2" Socket

1. Using the foot pedal, raise the litter to maximum height. Raise the Fowler to 90 degrees.
2. Remove the 3 bolts (A) holding the O2 bottle bracket (B) to the litter frame on the patient's left side and discard the bolts and bottle holder assembly.
3. Use the 3 bolts provided in the kit to attach the new bottle holder assembly to the litter frame.

# Service Information

---

## STATIC DISCHARGE PRECAUTIONS

The electronic circuits in the stretcher are completely protected from static electricity damage only while the stretcher is assembled. It is extremely important that all service personnel always use adequate static protection when servicing the electronic systems of the stretcher. *Whenever you are touching wires, you should be using static protection.*

### Static Protection Equipment

The necessary equipment for proper static protection is:

- 1 static wrist strap; 3M part number 2214 or equivalent,
- 1 grounding plug; 3M part number 61038 or equivalent,
- 1 test lead with a banana plug on one end and an alligator clip on the other; Smith part number N132B699 or equivalent.

---

## CAUTION

All electronic service parts will be shipped in static shielding bags. Do not open the bags until you have completed steps 2 and 3 of the following procedure. Do not place unprotected circuit boards on the floor. All circuit boards returned to Stryker should be shipped in the static shielding bags the new boards were shipped in.

### Static Protection Procedure

1. Turn off the main power switch at the foot end of the stretcher and unplug the power cord from the wall receptacle.
2. Insert the grounding plug into a properly grounded hospital grade wall receptacle. Plug the banana plug of the test lead into the receptacle on the grounding plug. Connect the alligator clip on the other end of the test lead to the ground chain of the stretcher.
3. Place the static control wrist strap on your wrist. Connect the alligator clip at the other end of the wrist strap cord to the ground chain of the stretcher.

# Service Information – Optional Scale System

---

## SCALE DISPLAY BOX REPLACEMENT

### Required Tools:

Wire Cutters                      1/2" Open End Wrench                      Phillips Screwdriver                      Torque Wrench

1. Pump the litter up to full height.
2. Using a T27 Torx, remove the screws holding the litter foot end cover and the foot end corner covers.
3. Using wire cutters, cut all cable ties and disconnect the cables from the load cells.
4. Using a 1/2" socket, remove the six bolts holding the litter foot end weldment. Save the bolts for reuse.
5. Drill out the rivets holding the scale display box to the foot end weldment.
6. Plug the load cell cables into the display cables to verify the system is working, then unplug the cables.
7. Using two rivets, attach the new scale display box to the foot end weldment.
8. Using the six bolts removed in step 3, reattach the foot end weldment to the siderail tubes.
9. Reinstall the corner covers and the foot end cover,
10. Route the display cables and connect them to the load cell cables.
11. Using a known weight, verify scale function with the litter flat and in approximately 10 degrees Trend and reverse Trend.

# Service Information – Optional Scale System

---

## SCALE DISPLAY COVER REPLACEMENT

### Required Tools:

Utility Knife

Phillips Screwdriver

1. Using a utility knife, pry up a corner of the display label and remove the label from the upper display cover.
2. Using a Phillips screwdriver, remove the four screws holding the upper display cover to the display box and lift off the cover and lens.
3. Remove the lens from the damaged display cover and install it on the new cover.
4. Using the four Phillips screws, reinstall the new upper display cover with the lens.
5. Clean the surface of the display cover with alcohol and install the new display label.

## SCALE DISPLAY LENS REPLACEMENT

### Required Tools:

Utility Knife

Phillips Screwdriver

1. Using a utility knife, pry up a corner of the display label and remove the label from the upper display cover.
2. Using a Phillips screwdriver, remove the four screws holding the upper display cover to the display box and lift off the cover and lens.
3. Remove and discard the damaged lens. Install the new lens on the cover.
4. Using the four Phillips screws, reinstall the upper display cover with the new lens.
5. Clean the surface of the display cover with alcohol and install the new display label.

# Service Information – Optional Scale System

---

## SCALE DISPLAY BATTERY HOLDER REPLACEMENT

### Required Tools:

Utility Knife

Phillips Screwdriver

Static Protection Equipment

Heyco Pliers

1. Properly ground yourself (see [page 21](#)).
2. Using a utility knife, pry up a corner of the display label and remove the label from the upper display cover.
3. Using a Phillips screwdriver, remove the four screws holding the upper display cover to the display box and lift off the cover and lens.
4. Lift the PCB board out of the display box. Disconnect the battery cable from the PCB board.
5. Remove the two Phillips head screws holding the battery compartment cover on the display assembly.
6. Using Heyco pliers, reach inside the battery compartment, squeeze the strain relief on the battery cables and push it up and out of the compartment.
7. Remove the strain relief from the cables and save it for reuse.
8. Pull the battery holder cables down through the hole in the battery compartment and discard the old battery holder.
9. Thread the cables on the new battery holder up through the hole in the battery compartment.
10. Attach the strain relief to the new battery holder cables, leaving 2 1/2 inches of cable at the top of the strain relief. Push the strain relief down into the hole.
11. Connect the battery cable to the PCB board and reinstall the PCB board into the display box.
12. Put the battery holder back inside the battery compartment, install 4 AA batteries with the positive and negative poles as indicated on the battery holder and reinstall the battery compartment cover using the two Phillips head screws.
13. Using the four Phillips screws, reinstall the upper display cover with the lens.
14. Clean the surface of the display cover with alcohol and install the new display label.

# Service Information – Optional Scale System

---

## LOAD CELL REPLACEMENT

### Required Tools:

Wire Cutters	7/16" Wrench	3/8" Drive Ratchet
7/16" Socket	9/16" Socket	7/32" Allen Wrench
T27 Torx Wrench	Torque Wrench	

1. Properly ground yourself (see [page 21](#)).
2. Pump the litter up to full height. Raise the Fowler to full up.
3. Using wire cutters, cut the cable ties holding the load cell cable to the litter frame at the head end of the stretcher, on the side where the defective load cell is located. Cut the cable ties holding the cable to the head end lift header bracket.
4. Disconnect the load cell from the cable (labeled head/right and head/left) on the side where the defective load cell is located.
5. Support the end of the stretcher so it won't fall when the load cell is removed.
6. Using a 7/32" Allen wrench and 9/16" socket and ratchet, remove the two nuts and bolts holding the load cell to the lift header bracket. Save the nuts and bolts for reuse.
7. If the load cell cannot be worked free, remove the bolt from the jack cross support tube and lift the cross support off the jack. The load cell should be easily removed.
8. Remove the bushing from the load cell and save for reuse.
9. Reverse steps 1–8 to install the new load cell. Torque the two bolts holding the load cell to  $20 \pm 3$  ft./lbs.

### NOTE

**Do not** compress the cable when installing the new cable ties.

10. Verify the load cell function as described under **Displaying Individual Load Cell Outputs** on [page 26](#).
11. Recalibrate the scale system (see [page 27](#)).

# Service Information – Optional Scale System

---

## SCALE SYSTEM DIAGNOSTICS

1. To enter diagnostic mode, hold all three buttons on the display box for at least 6 seconds until the display reads diag. Press the zero button to toggle down between the diagnostic functions listed below and press the lb / kg button to toggle up between functions.
2. If no buttons are pressed, the system will remain in diagnostic mode for approximately 5 minutes before turning off.

### Diagnostics Mode Screens:

DISPLAY	INDICATION / UNITS
diag	N/A
hr (head / right)	Head / right load cell reading in pounds
hl (head / left)	Head / left load cell reading in pounds
fr (foot / right)	Foot / right load cell reading in pounds
fl (foot / left)	Foot / left load cell reading in pounds
batt	Battery voltage
soft	Software version #
hard	Hardware version #
calib	Slope Factor
unit	Weight unit in lbs., kgs. or both

### Displaying Individual Load Cell Outputs:

After entering diagnostics, press the lb / kg button to toggle up between the individual load cell readings. 15–45 lbs is a typical reading for an empty stretcher. Anything drastically outside that range indicates a problem with that load cell. Before replacing a load cell, verify the cable to the individual load cell is properly connected. A reading of 497.5 lbs indicates the load cell cable is disconnected or the load cell has been damaged.

If the system detects a defective load cell, the display will read Test then Err. Verify the load cell cable is properly connected. If it is, replace the load cell. When the load cell is functioning properly, the display will read Test then Good. The scale will operate normally.

### Battery Voltage:

After entering diagnostics, press the lb / kg button to toggle up to the BATT function. If the battery voltage reading is below 5.1, change the batteries (see [page 27](#)). The display will read LO BATT and the battery icon will be flashing at this voltage.

# Service Information – Optional Scale System

---

## SCALE SYSTEM DIAGNOSTICS (CONTINUED)

### Scale Calibration:

Calibrate the scale system with a known weight of approximately 200 pounds.

1. Remove all items from the stretcher except the mattress and other items used during the patient's stay.
2. After going to the calibration menu in diagnostics, hold the zero and lb / kg buttons for two seconds to zero the stretcher. The display will read Hold. Release the button when the display reads ReI. The display will read 000.0 then 200.0 lbs.
3. Place a calibrated 200 pounds on the middle of the stretcher litter.
4. Hold the zero and lb / kg buttons for approximately two seconds. The display will read Hold. Release the button when the display reads ReI. The scale system is calibrated. To check the calibration, place several known weights on the litter and verify the scale displays the correct weight reading.

### Unit Lock:

Under normal operation, the scale system will toggle between pounds and kilograms when the lb / kg button is pressed. To lock the weight unit, hold the zero and lb / kg button for two seconds. After going to the unit lock menu, press the zero button to toggle between pounds lock (lb) or kilograms lock (kg) or any unit. Press the zero and lb / kg button for two seconds to lock the unit. The display will read ReI, then only kg or only lb depending on which unit you locked in.

## SCALE SYSTEM BATTERIES

### NOTE

To avoid completely draining the batteries and having the optional scale system shut down, replace the batteries whenever only one of the charge indicator bars on the display is black.

1. Remove the two Phillips head screws holding the battery compartment cover on the display assembly.
2. Replace all four AA batteries, being sure to install the positive and negative poles as indicated on the battery holder. Standard alkaline batteries are recommended. Do not mix old and new batteries or mix different types of batteries. Properly dispose of the old batteries in accordance with local regulations.
3. Reinstall the screws and the cover.

If the display is flashing "Lo Batt", the batteries are drained and the scale system is disabled. Replace the batteries with four new AA batteries as described above.

# Quick Reference Replacement Parts List

---

## NOTE

The parts and accessories listed on this page are all currently available for purchase. Some of the parts identified on the assembly drawings pages in this manual may not be individually available for purchase. Please call Stryker Customer Service at 1-800-327-0770 for availability and pricing.

# Warranty

---

## Limited Warranty:

Stryker Medical Division, a division of Stryker Corporation, warrants to the original purchaser that its products should be free from defects in material and workmanship for a period of two (2) years after date of delivery. Stryker's obligation under this warranty is expressly limited to supplying replacement parts and labor for, or replacing, at its option, any product which is, in the sole discretion of Stryker, found to be defective. Stryker warrants to the original purchaser that the frame and welds on its beds will be free from structural defects for as long as the original purchaser owns the bed. If requested by Stryker, products or parts for which a warranty claim is made shall be returned prepaid to Stryker's factory. Any improper use or any alteration or repair by others in such manner as in Stryker's judgement affects the product materially and adversely shall void this warranty. Any repair of Stryker products using parts not provided or authorized by Stryker shall void this warranty. No employee or representative of Stryker is authorized to change this warranty in any way.

Stryker Medical stretcher products are designed for a 10 year expected service life under normal use, conditions, and with appropriate periodic maintenance as described in the maintenance manual for each device. Stryker warrants to the original purchaser that the welds on its stretcher products will be free from structural defects for the expected 10 year life of the stretcher product as long as the original purchaser owns the product.

This statement constitutes Stryker's entire warranty with respect to the aforesaid equipment. STRYKER MAKES NO OTHER WARRANTY OR REPRESENTATION, EITHER EXPRESSED OR IMPLIED, EXCEPT AS SET FORTH HEREIN. THERE IS NO WARRANTY OF MERCHANTABILITY AND THERE ARE NO WARRANTIES OF FITNESS FOR ANY PARTICULAR PURPOSE. IN NO EVENT SHALL STRYKER BE LIABLE HEREUNDER FOR INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING FROM OR IN ANY MANNER RELATED TO SALES OR USE OF ANY SUCH EQUIPMENT.

## To Obtain Parts and Service:

Stryker products are supported by a nationwide network of dedicated Stryker Field Service Representatives. These representatives are factory trained, available locally, and carry a substantial spare parts inventory to minimize repair time. Simply call your local representative, or call Stryker Customer Service at (800) 327-0770.

## Service Contract Coverage:

Stryker has developed a comprehensive program of service contract options designed to keep your equipment operating at peak performance at the same time it eliminates unexpected costs. We recommend that these programs be activated *before* the expiration of the new product warranty to eliminate the potential of additional equipment upgrade charges.

## **A SERVICE CONTRACT HELPS TO:**

- Ensure equipment reliability
- Stabilize maintenance budgets
- Diminish downtime
- Establish documentation for JCAHO
- Increase product life
- Enhance trade-in value
- Address risk management and safety

# Warranty

**Stryker offers the following service contract programs:**

**Stryker Medical also offers *personalized* service contracts.**

**Pricing is determined by age, location, model and condition of product.**

**For more information on our service contracts,  
please call your local representative or call (800) 327-0770 (option #2).**

## **Return Authorization:**

Merchandise cannot be returned without approval from the Stryker Customer Service Department. An authorization number will be provided which must be printed on the returned merchandise. Stryker reserves the right to charge shipping and restocking fees on returned items.

**SPECIAL, MODIFIED, OR DISCONTINUED ITEMS NOT SUBJECT TO RETURN.**

## **Damaged Merchandise:**

ICC Regulations require that claims for damaged merchandise must be made with the carrier within fifteen (15) days of receipt of merchandise. **DO NOT ACCEPT DAMAGED SHIPMENTS UNLESS SUCH DAMAGE IS NOTED ON THE DELIVERY RECEIPT AT THE TIME OF RECEIPT.** Upon prompt notification, Stryker will file a freight claim with the appropriate carrier for damages incurred. Claim will be limited in amount to the actual replacement cost. In the event that this information is not received by Stryker within the fifteen (15) day period following the delivery of the merchandise, or the damage was not noted on the delivery receipt at the time of receipt, the customer will be responsible for payment of the original invoice in full.

Claims for any short shipment must be made within thirty (30) days of invoice.

## **International Warranty Clause:**

This warranty reflects U.S. domestic policy. Warranty outside the U.S. may vary by country. Please contact your local Stryker Medical representative for additional information.
